

Sydney, 17th February 2017

EEW developing 280 MW Solar farm in Queensland capable to export energy to Southern States.

Eco Energy World (EEW) Australia, an Australian developer of utility scale solar projects today announced the latest and largest project, a solar farm of 280 MW near to Rockhampton in Queensland.

The project will be interconnected to national high voltage grid, which enables the project to sell energy both to the state of Queensland but also other states such as New South Wales and South Australia which suffered lately of black outs and seems to be in urgent need of energy supply.

EEW Chairman Svante Kumlin said: “We believe Queensland has a huge potential for Solar energy with high irradiance, good infrastructure and access to land. This solar farm will be able not only to supply Queensland with clean energy but also other states due to its unique location and technical design. We are so pleased for the Rockhampton area, and the southern Queensland Region. This project will increase the utility solar generation by 280MW and will create

new opportunities for the community including many jobs and services.”

The solar farm will cover an area 607 hectares and will comprise 875 photovoltaic modules or ‘solar panels’. The solar panels will be installed on ground mounted frames that will slowly track the daily horizontal movement of the sun. When operational, the solar farm will generate renewable energy to meet the annual power needs of approximately 73000 average households.

The AU\$500M project construction is expected to start in Q3 2018 and it will create up to 300 construction jobs, and when operational, the facility will employ up to five full time and 25 part time positions.

EEW Australia is developing 1GW of solar farms in Australia planned over the next two years, and have up to now secured planning consent for appx 200 MW. The company plans to start construction of first project the Solar farm Aramara in March 2017.

EEW Australia is a subsidiary of the EEW Holdings. The parent company has developed projects in the UK, Italy, Spain, Germany, France, Sweden and has operational assets in Russia.

About Eco Energy World

Eco Energy World is an international developer of utility scale Solar Power Projects., Since our establishment in 2008 we have gained experience in all areas of developing solar power plants such as; green field development, technical design, construction, structure finance & legal as well as manufacturing of solar panels.

The company has developed several hundred MW of projects in Europe including 20 large scale solar projects in the United Kingdom. We have currently more than 1 GW of solar projects in development.

EEW have offices and presence in London, Sydney, Monaco and Moscow. Our head office is located in London, Knightsbridge
